

## ***Single-Bit Dual-Supply Bus Transceiver With Configurable Voltage Translation and 3-State Outputs***

**UM3601S SOT23-6**

### **General Description**

The UM3601 is a dual-supply, single-bit non-inverting bus transceiver that is optimized to operate with  $V_{CCA}$  and  $V_{CCB}$  set at 1.65V to 5.5V. The A port is designed to track  $V_{CCA}$ .  $V_{CCA}$  accepts any supply voltage from 1.65V to 5.5V. The B port is designed to track  $V_{CCB}$ .  $V_{CCB}$  accepts any supply voltage from 1.65V to 5.5 V. This allows for universal low-voltage bidirectional translation between any of the 1.8V, 2.5V, 3.3V, and 5.5V voltage nodes.

The UM3601 is designed for asynchronous communication between two data buses. The logic levels of the direction-control (DIR) input activate either the B-port output or the A-port output. The device transmits data from the A bus to the B bus when the B-port outputs are activated, and from the B bus to the A bus when the A-port outputs are activated. The input circuitry on both A and B ports is always active and must have a logic HIGH or LOW level applied to prevent excess  $I_{CC}$  and  $I_{CCZ}$ .

In the design of the UM3601, the control pin (DIR) is supplied by  $V_{CCA}$ .

The UM3601S is available in SOT23-6 package.

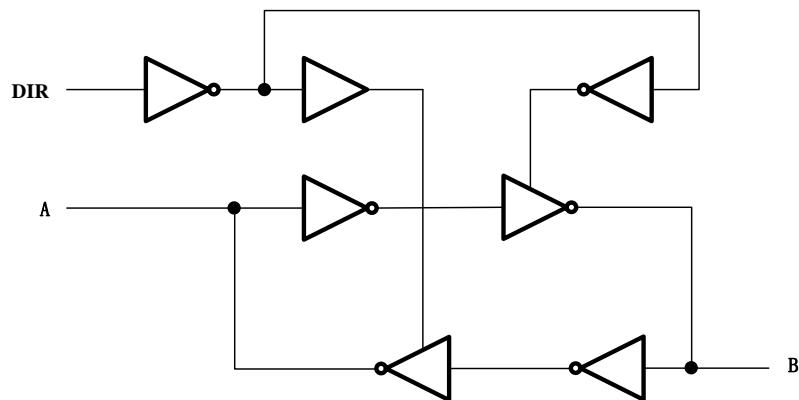

### **Applications**

- Personal Electronic
- Industrial
- Enterprise
- Telecom

### **Features**

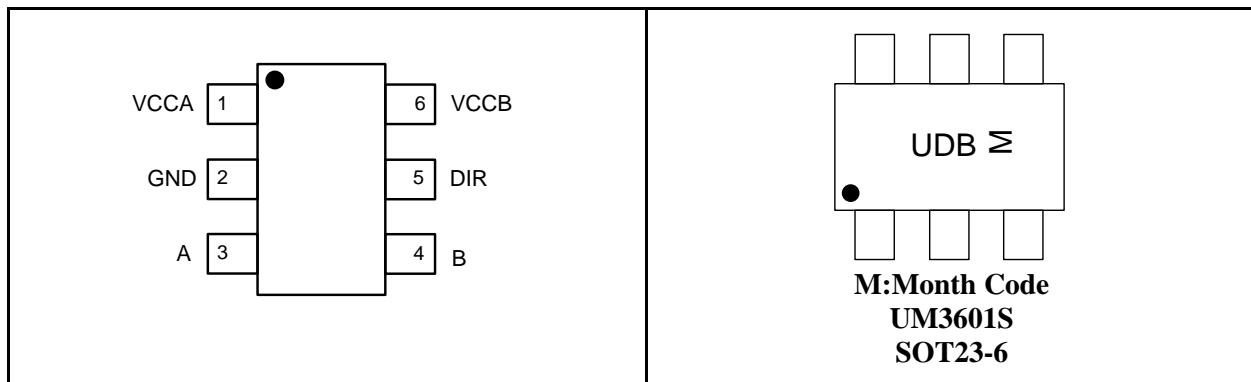

- Control Inputs  $V_{IH}/V_{IL}$  Levels Are Referenced to  $V_{CCA}$  Voltage
- $V_{CC}$  Isolation Feature – If Either  $V_{CC}$  Input Is at GND, All Are in the High-Impedance State
- Fully Configurable Dual-Rail Design Allows Each Port to Operate Over the Full 1.65V to 5.5V Power-Supply Range
- Latch-Up Performance Exceeds 100 mA
- ESD Protection Exceeds  $\pm 4kV$  Human-Body Model
- Available in SOT23-6 Package
- Max Data Rates  
220 Mbps (3.3V to 5.5V Translation)  
150 Mbps (3.3V to 1.8V Translation)

### Pin Descriptions

| Pin No. | Pin Name         | Function  |
|---------|------------------|---|
| 1       | V <sub>CCA</sub> | A-port supply voltage. $1.65 \text{ V} \leq V_{CCA} \leq 5.5 \text{ V}$ . |
| 2       | GND              | Ground.   |
| 3       | A                | Input/output A Referenced to V <sub>CCA</sub>                             |
| 4       | B                | Input/output B Referenced to V <sub>CCB</sub>                             |
| 5       | DIR              | Direction-control signal.   |
| 6       | V <sub>CCB</sub> | B-port supply voltage. $1.65 \text{ V} \leq V_{CCB} \leq 5.5 \text{ V}$ . |

## Ordering Information

| Part Number | Marking | Package Type | Shipping Qty               |
|-------------|---------|--------------|----------------------------|
| UM3601S     | UDB     | SOT23-6      | 3000pcs/7Inch<br>Tape&Reel |

### Absolute Maximum Ratings (Note 1)

Over operating free-air temperature range (unless otherwise noted)

| Symbol           | Parameter   | Value             | Unit                            |
|------------------|---|-------------------|---------------------------------|
| V <sub>CCA</sub> | Supply Voltage Range  | -0.5 to +6.5      | V                               |
| V <sub>CCB</sub> | Supply Voltage Range  | -0.5 to +6.5      | V                               |
| V <sub>I</sub>   | Input Voltage Range (Note 2)  | A ports           | -0.5 to +6.5                    |
|                  |   | B ports           | -0.5 to +6.5                    |
| V <sub>O</sub>   | Voltage Range Applied to Any Output in the High-Impedance or Power-Off State (Note 2) | A ports           | -0.5 to +6.5                    |
|                  |   | B ports           | -0.5 to +6.5                    |
| V <sub>O</sub>   | Voltage Range Applied to Any Output in the High or Low State (Note 2, 3)              | A ports           | -0.5 to (V <sub>CCA</sub> +0.5) |
|                  |   | B ports           | -0.5 to (V <sub>CCB</sub> +0.5) |
| I <sub>IK</sub>  | Input Clamp Current   | V <sub>I</sub> <0 | -50                             |
| I <sub>OK</sub>  | Output Clamp Current  | V <sub>O</sub> <0 | -50                             |
| I <sub>O</sub>   | Continuous Output Current   | ±50               | mA                              |
|                  | Continuous Current through V <sub>CCA</sub> , V <sub>CCB</sub> , or GND               | ±100              | mA                              |
| T <sub>OP</sub>  | Operating Temperature Range   | -40 to +85        | °C                              |
| T <sub>STG</sub> | Storage Temperature Range   | -65 to +150       | °C                              |
| T <sub>J</sub>   | Junction Temperature  | -40 to +125       | °C                              |

Note 1: Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

Note 2: The input and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.

Note 3: The value of V<sub>CCA</sub> and V<sub>CCB</sub> are provided in the recommended operating conditions table.

## Package Thermal Impedance

| Symbol                      | Parameter                                 | Value   | Unit  |
|-----------------------------|---|---------|-------|
| $R_{\theta JA}$             | Junction-to-ambient thermal resistance    | SOT23-6 | 200.1 |
| $R_{\theta JC(\text{top})}$ | Junction-to-case (top) thermal resistance | SOT23-6 | 144.5 |
| $R_{\theta JB}$             | Junction-to-board thermal resistance      | SOT23-6 | 45.7  |

## ESD Rating

| Symbol         | Parameter              | Value   | Unit |
|----------------|------------------------|---------|------|
| ESD Protection | Human body model (HBM) | $\pm 4$ | kV   |

### Recommended Operating Conditions (Note 1, 2, 3, 4)

| Symbol              | Parameter                          |   | V <sub>CCI</sub> | V <sub>CCO</sub> | Min                     | Max              | Unit |

| $\Delta t/\Delta V$ | Input Transition Rise or Fall Time | Data Inputs   | 1.65 V to 1.95 V |                  | 20                      |                  | ns/V |
|                     |                                    |   | 2.3 V to 2.7 V   |                  | 20                      |                  |      |
|                     |                                    |   | 3 V to 3.6 V     |                  | 10                      |                  |      |
|                     |                                    |   | 4.5 V to 5.5 V   |                  | 5                       |                  |      |

Note 1: V<sub>CCI</sub> is the V<sub>CC</sub> associated with the data input port.

Note 2: V<sub>CCO</sub> is the V<sub>CC</sub> associated with the output port.

Note 3: All unused or driven (floating) data inputs (I/Os) of the device must be held at logic High or Low (preferably V<sub>CCI</sub> or GND) to ensure proper device operation and minimize power.

Note 4: All unused control inputs must be held at V<sub>CCA</sub> or GND to ensure proper device operation and minimize power consumption.

Note 5: For V<sub>CCI</sub> values not specified in the data sheet, V<sub>IH</sub> min = V<sub>CCI</sub> × 0.7 V, V<sub>IL</sub> max = V<sub>CCI</sub> × 0.3 V.

Note 6: For V<sub>CCA</sub> values not specified in the data sheet, V<sub>IH</sub> min = V<sub>CCA</sub> × 0.7 V, V<sub>IL</sub> max = V<sub>CCA</sub> × 0.3 V.

### **Electrical Characteristics (Note 1, 2)**

Voltage Waveforms Pulse Duration

Voltage Waveforms Propagation Delay Times

Voltage Waveforms Enable and Disable Times

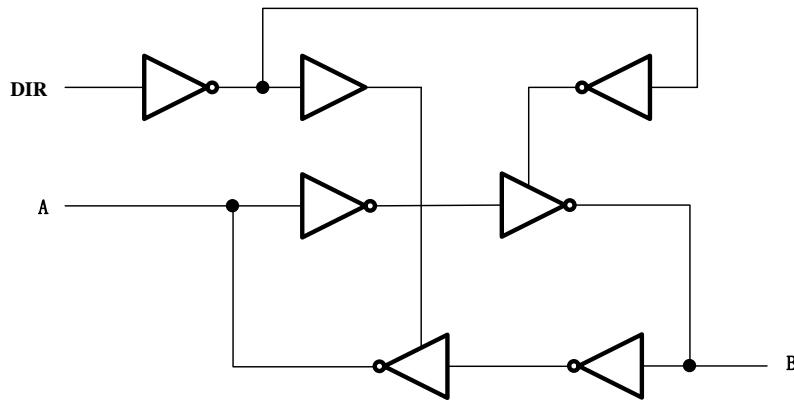

**NOTES:**

- A.  $C_L$  includes probe and jig capacitance.
- B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics:  $PRR \leq 10$  MHz,  $Z_o = 50\Omega$ ,  $dv/dt \geq 1V/ns$ .
- D. The outputs are measured one at a time, with one transition per measurement.
- E.  $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
- F.  $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
- G.  $t_{PLH}$  and  $t_{PHL}$  are the same as  $t_{pd}$ .
- H.  $V_{CCI}$  is the  $V_{CC}$  associated with the input port.
- I.  $V_{CCO}$  is the  $V_{CC}$  associated with the output port.
- J. All parameters and waveforms are not applicable to all devices.

## Detailed Description

The UM3601 is a single-bit, dual supply non-inverting transceiver. Pin A and direction control pin are support by V<sub>CCA</sub> and pin B is support by V<sub>CCB</sub>. The A port is able to accept I/O voltages ranging from 1.65 V to 5.5 V, while the B port can accept I/O voltages from 1.65 V to 5.5 V. The high on DIR allows data transmission from A to B and a low on DIR allows data transmission from B to A.

## Functional Block Diagram

Logic Diagram (Positive Logic)

## Feature Description

### Fully Configurable Dual-Rail Design Allows Each Port to Operate Over the Full 1.65V to 5.5V Power-Supply Range

Both V<sub>CCA</sub> and V<sub>CCB</sub> can be supplied at any voltage between 1.65V and 5.5V making the device suitable for translating between any of the voltage nodes (1.8V, 2.5V, 3.3V and 5V).

### I<sub>off</sub> Supports Partial-Power-Down Mode Operation

I<sub>off</sub> prevents backflow current by disabling I/O output circuits when device is in partial-power-down mode.

## Device Functional Modes

The UM3601 is bus transceiver that can operate from 1.65V to 5.5V (V<sub>CCA</sub>) and 1.65V to 5.5V (V<sub>CCB</sub>). The signal translation between 1.65V and 5.5V requires direction control and output enable control. When DIR is high, data transmission is from A to B. When DIR is low, data transmission is from B to A.

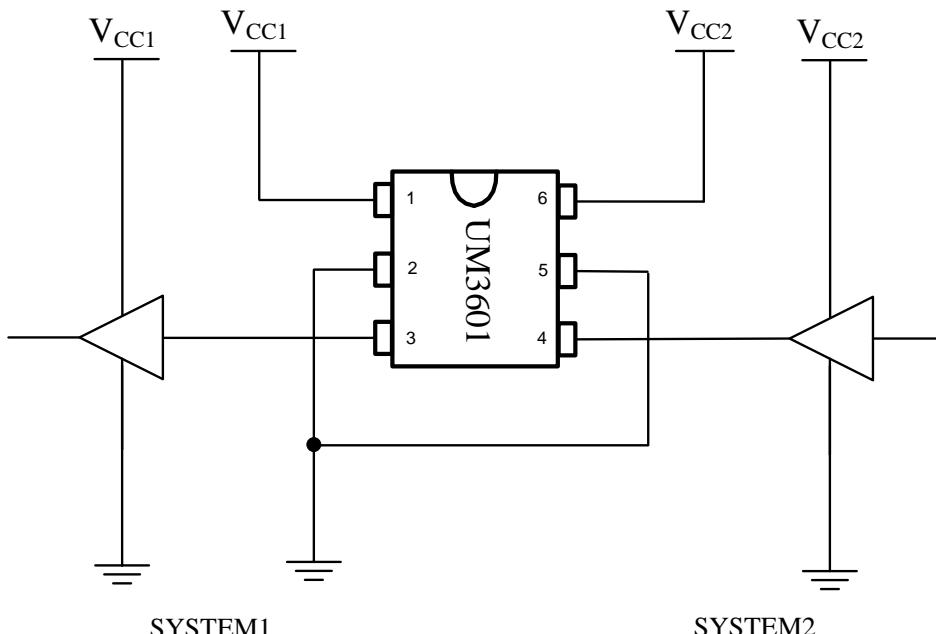

**Table 1. Function Table(1)**

| INPUTS<br>DIR | OPERATION       |
|---------------|-----------------|
| L             | B data to A bus |
| H             | A data to B bus |

(1) Input circuits of the data I/Os are always active.

## Application Information

The UM3601 device can be used in level-translation applications for interfacing devices or systems operating at different interface voltages with one another. The maximum output current can be up to 32 mA when device is powered by 5.5 V.

Typical Application Circuit

## Package Information

### UM3601S SOT23-6

#### Outline Drawing

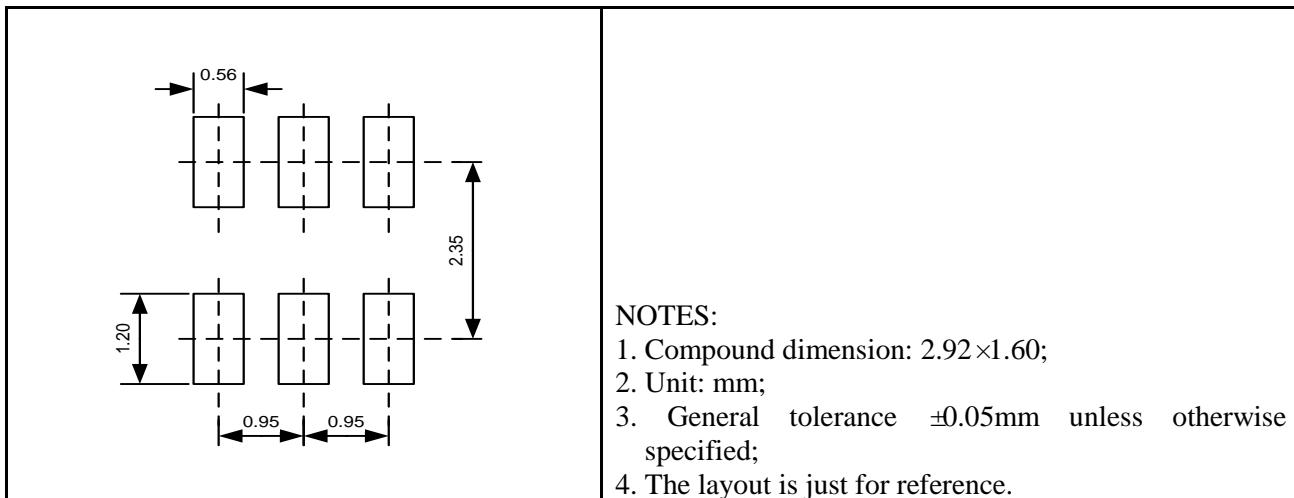

The outline drawing provides three views of the package:

- Top View:** Shows the rectangular package with pins numbered 1 through 6. Dimensions include D (width), E (height), e (pin pitch), e1 (lead thickness), and b (lead width).
- Side View:** Shows the height A and lead thickness A1.
- End View:** Shows the lead angle θ and lead length L.

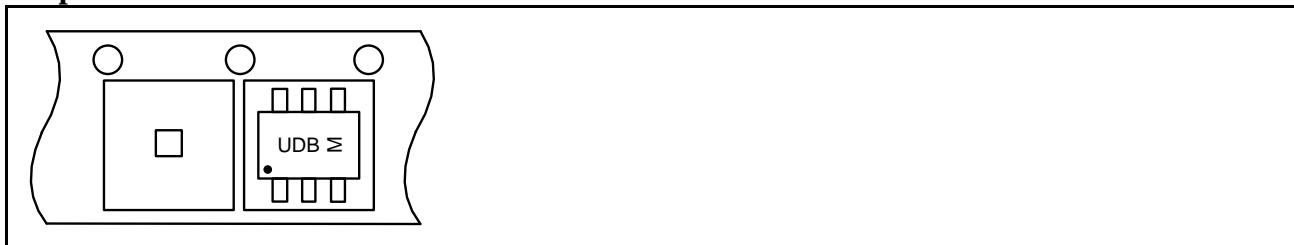

**DIMENSIONS**

| Symbol | MILLIMETERS |      |      | INCHES   |       |       |
|--------|-------------|------|------|----------|-------|-------|
|        | Min         | Typ  | Max  | Min      | Typ   | Max   |

|-------------|--------------|------------------|-----------|--------------|
| UM3601S     | SOT23-6      | 8 mm             | 4 mm      | 180 mm       |

## GREEN COMPLIANCE

Union Semiconductor is committed to environmental excellence in all aspects of its operations including meeting or exceeding regulatory requirements with respect to the use of hazardous substances. Numerous successful programs have been implemented to reduce the use of hazardous substances and/or emissions.

All Union components are compliant with the RoHS directive, which helps to support customers in their compliance with environmental directives. For more green compliance information, please visit:
