

150mA, Micropower, Low Dropout Linear Regulator

UM3730DA-xx DFN4 1.0×1.0

UM3730P-xx SOT353

General Description

The UM3730 series are low dropout linear regulators designed for low power portable applications. Typical output noise is only $220\mu\text{V}_{\text{RMS}}$ and typical dropout voltage is 155mV at the load current of 150mA. Ideal for battery powered applications, the UM3730 draws only $29\mu\text{A}$ current during no load operation. The UM3730 includes an auto-discharge feature that is activated when the enable pin is low.

Other features include 2% output voltage accuracy, excellent transient response, stability with ultra low ESR ceramic capacitors as small as $1\mu\text{F}$, thermal overload protection and output current limiting.

The UM3730 series are available in low profile DFN4 1.0×1.0 and SOT353 packages.

Absolute Maximum Ratings (Note 1)

Symbol	Parameter	Value	Unit
V _{IN}	Supply Voltage on VIN Pin	-0.3 to +7.5	V
V _{OUT}	Voltage on VOUT Pin	-0.3 to +7.5	V
T _J	Operating Junction Temperature (Note 2, 3)	-40 to +125	°C
T _{STG}	Storage Temperature Range	-55 to +150	°C
T _L	Lead Temperature for Soldering 10 Seconds	+260	°C
θ _{JA} (Note 4)	Package Thermal Resistance	DFN4 1.0×1.0	250
		SOT353	256

Note 1: Absolute Maximum Ratings are those values beyond which the life of a device may be impaired.

Note 2: The UM3730 is tested and specified under pulse load conditions such that T_J≈T_A. Specifications over the -40 °C to 125 °C operating junction temperature range are assured by design, characterization and correlation with statistical process controls.

Note 3: This IC includes over temperature protection that is intended to protect the device during momentary overload conditions.

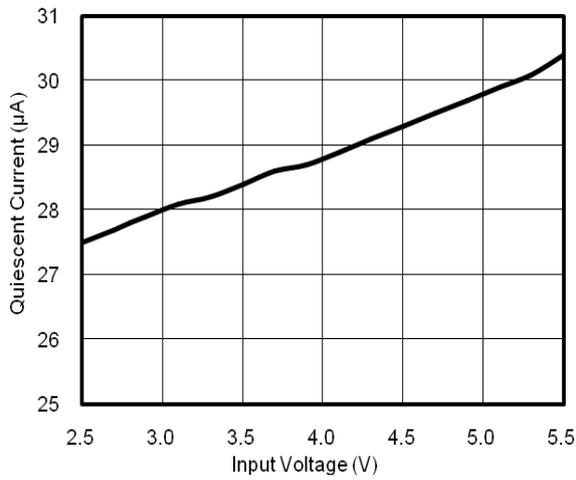

Note 4: The maximum allowable power dissipation of any T_A (ambient temperature) is P_{DMAX}=(T_{JMAX}-T_A)/θ_{JA}. Exceeding the maximum allowable power dissipation will result in excessive die temperature and the regulator will go into thermal shutdown.
